

Example

Example of an Excellent Prompt

Task Type: Code Generation
Language: Python

Clear Ask: Write a function that takes a list of strings and returns only the ones that are palindromes.
Context: You are building a text processing tool to clean and analyze user inputs.

Personal Perspective: As a beginner Python developer, the function should be simple and easy to read, with clear variable names and comments.
Goal: The function should efficiently filter out non-palindromes without altering the original list.

Prompt:
"You are developing a text analysis tool in Python. Write a function that takes a list of strings and returns a new list containing only the palindromes. A palindrome is a string that reads the same backward as forward, ignoring spaces, punctuation, and case. As a beginner Python developer, ensure the code is simple, includes comments, and uses clear variable names."
