

Task Interface

While we know that each project looks different, this section showcases the task interface and the steps to follow.

1) When tasking as an attempter, the first section is for reminders/info for your specific project. Please note: as we progress, the content in these sections may change.

Welcome to Doeling Scratch Project

Read the instructions carefully before continuing.

Goal of this task

The goal of this task is to generate from scratch the best possible prompts and responses! The project emphasizes creativity, organization, and clarity, with a strong focus on proofreading and refining both the prompts and responses to perfection.

In order to produce high quality task that are better than what a state-of-the-art (SOTA) model can write, make sure to do the following:

- Review the Task Type and Language Code:** In the UI there will be a note indicating the task type (e.g., Code Generation, Problem Reflection, Test Reasoning, Code Refactoring, Structure Data Generation, Retrieval Augmented Generation (RAG), Test Generation, Bug Fixing, Solution Reasoning, Tool Use). Review the task-specific instructions for any clarifications. Review the [task specific instructions](#) for any clarifications.
- Write the prompt: Be the user by following this structure:**

 - Clear Asks:** Specific requests or tasks to be completed.
 - Personal Perspective:** The individual's viewpoint or situation.
 - Context:** Background information or circumstances surrounding the request.
 - Goal / Value:** The desired outcome or benefit of fulfilling the request.
- Write the response:** Become the LLM: If you were to send your 'user written prompt' to an LLM and that LLM provided you with your written response, you should be delighted. This response must be:

 - Highly creative
 - Neatly organized and easy to read
 - Thoughtfully designed to be delightful to the reader
- Proofread your response:**

 - Ensure it has perfect spelling, grammar, and punctuation. In order to beat SOTA, you will need to proofread your work and eliminate any grammatical, spelling, punctuation, or other errors of this kind.
 - Validate that your response completely satisfies the prompt's instruction and constraints.
- Consider the User:** Would the response you created delight the user relative to the prompt? Does it address the prompt completely? Does it understand the intention of the prompt?

Receiving your Task Back

Sometimes, you will have your task returned to you. If that happens, be sure to follow these steps:

- Acknowledge the feedback.** Read your feedback, acknowledge it, and give it a thumbs up or a thumbs down. Understand what the reviewer's perspective is to decide how you can further improve your task.
- Re-read the chat history, user prompt, and response.** Familiarize yourself again with the task and read your response to determine how best to improve it.
- Re-write your earlier response to be the best possible.** You may be tempted to resubmit it without making significant or valid improvements, **but we highly discourage you from doing this.** Your response will return to the same reviewer as your initial attempt, so you should implement their feedback as effectively as possible. You should also make any additional changes or adjustments that would improve the response. Remember to *follow all prompt aspects*, provide depth and creativity, be accurate if appropriate, and format your response effectively.
- Proofread your response to ensure that it addresses all of the feedback so it is stellar.** ALWAYS proofread your response before you submit it. You likely catch multiple errors and spot multiple ways to improve it. It is

3) After the prompt section, your response section follows right after.

You'll need to write a response to the prompt. Place a strong emphasis on creativity in all tasks.

Use appropriate markdown formatting and ensure that your response is readable.

 **Response**
Write a response to the prompt. Place a strong emphasis on creativity in all tasks. Creativity is not just encouraged; it's essential. Responses and solutions should be effective and display a high degree of originality and inventive thinking. Please use appropriate markdown formatting and ensure that your response is readable.
